A Royal Mess

Using the clues, you can begin to solve this like a traditional logic problem. However, you will need to use one more 112 problem to finish it: N-Queens (clued by the puzzle's flavor). Each 7x7 square is an N-Queens board, so no two correct answers can be in the same row, column, or diagonal line. Using this, you can solve the logic puzzle, and read out the letters from the correct answers' squares to find the answer.
